New Left Review (Dirubhai Ambani and Bill Gates – Lectures to be Forecasted in Poulantzas' Sense of a C.m.p)
By Perry Anderson

Part I – The Originals

I. Financial Cycles in America and Financial Cycles in the Conceptual Object of Bill Gates and Dirubhai before that.

In fact financial cycles are again up and running, from what was a great American transition to Taylorism as production and firm and clientele as billing phone numbers to boost a company with a trillion dollar notion which is called the unethical and fully financial trasactions of a company with phone numbers which are relevant – imagine getting the phone of Slavoj Zizek and asking him philosophically ideas – like what is the idea of a shoe company – he would say I prefer abstract shoes like abstract Hegelianism – this becomes one patented idea when the conversation is fulfilling noted with a number of cheap ideas from common people – I want shoes to be cheap and affordable, or I want stylish women's shoes.

This then is how America thought of shoes and leads to Nike today, each capitalist knows then as Dirubhai argues the importance of poverty and laboring ideas with ethical financial values to the pristine ideas of capitalist joined up – like cheap clothing with high tailoring that Sirohi argues makes an Argentine Zara as its higher idea when joined with a comment – Make it like Argentine Spanish abstraction and style – like a woman who wears fine trousers and fine Y shirts which then is based on the tailor's style of laboring on these styles of course.

II. Fore-casting politics and fore-casting Capitalism these days

In politics Sirohi organizes the praxis of mass participation cycles in China, Cuba and India, even perhaps Algeria and Latin America in the social cycle sense of participation in the economy as one argues about world-wide cycles of mass protest or wage struggles – yes of course, but then re-presentation says there will be labour leaders and capitalists who share the same history – in the sense of of Communists and capitalists in the same whiff - we call Dirubhai visions or Bill Gates visions in the ideational direction of dot.com people together – and that is called a financial cycle Mcshull event – not just a hotel living life but also working and sharing billing news – imagine that shoe company to get the phones and ideas – now they hang out is the meaning of Dirubhai meeting Ambedkar at Marine Drive one explains – I was successful as a capitalist and needed Ambedkar's company – so that history is a wave as Sartre argues, or totalisation called a financial history with a concreteness called history.
